

```
public interface StringList {
    /* Add an element at the beginning of the list */
    void prepend(String s); // (new!)
    /* Add an element at the end of the list */
    void add(String s);
    /* Get the element at the given index */
    String get(int index);
    /* Get the number of elements in the list */
    int size();
    /* Add an element at the specified index */
    void insert(int index, String s);
    /* Remove the element at the specified index */
    void remove(int index);
}
```

```
import static org.junit.Assert.assertEquals;
import org.junit.Test;

public class TestStringList {

    @Test
    public void testAddThenGet() {
        StringList slist = new LinkedList();
        slist.prepend("banana");
        slist.prepend("apple");

        assertEquals("apple", slist.get(0));
        assertEquals("banana", slist.get(1));
    }

    @Test
    public void testAddThenSize() {
        StringList slist = new LinkedList();
        slist.prepend("banana");
        slist.prepend("apple");

        assertEquals(, slist.size());
    }
}
```

```
class Node {
    String value;
    Node next;
    public Node(String value, Node next) {
        this.value = value;
        this.next = next;
    }
}

public class LinkedList implements StringList {

    Node front;

    // How will we construct it?

    // How will we implement the methods?
    // Focus on .prepend(), .get(), and the diagram first
}
```

@A.prepend("banana")	
this	@A
s	"banana"
returns:	

@A.prepend("apple")	
this	@A
s	"apple"
returns:	

@A	LinkedList front: <del>@B</del> @C		
@B	Node value "banana" next null		
@C	Node value "apple" next @B		

```
public class TestStringList {
    ... all code from other side ...
    @Test
    public void testAddMany() {
        StringList slist = new LinkedListStringList();
        slist.add("m");
        slist.add("n");
        slist.add("o");
        // memory diagram here!
        slist.add("p");

        assertEquals("p", slist.get(3));
    }
}

public class LinkedListStringList {
    ... all code from other side ...
    // Now focus on .add() and .size()

}
```

@A	LinkedListStringList front: @B	@C	Node value: "m" next: @D
@B	Node value: null next: @C	@D	Node value: "n" next: @E
		@E	Node value: "o" next: null

@A.add("p")	
this	
s	
returns:	

**Key Linked list idea:** elements are stored in nodes that track a value and a reference to the node after them.
